

## MESCO Pre-engineered Buildings

CM&bull;GC Building Corp. is a MESCO Authorized Builder serving the pre-fabricated metal building needs of New England. We have significant experience in the manufacturing, institutional, corporate, and health care construction markets. Our association with MESCO Metal Buildings allows us to offer our clients a value that is hard to duplicate using conventional construction methods.

CM&bull;GC Building Corp.'s in-house design, engineering, project management, and supervision capabilities provide our clients with single-source support from preliminary project planning through public permitting and construction to ongoing building maintenance. Our team is able to deliver big company expertise with the agility of a smaller firm, and many of our clients have returned to us multiple times for their new projects.

For more information, please contact us at (603) 629-9992, or [click here](#) to email us.

Why a metal building system?

A steel building system offers significant cost and performance advantages over conventional construction methods. With systems construction, each part is engineered and designed to assemble together. So, a steel building system can be built with greater speed and precision than is generally possible using conventional methods.

When you add the extensive design options available with a steel building system, the decision becomes even easier to make.

The advantages of steel-systems construction and metal roof systems include:

- Faster installation
- Lower lifecycle costs for greater return on investment
- Compelling sustainability attributes
- Virtually unlimited design flexibility
